The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/562,805	Applicant(s) LE ROY ET AL.	
	Examiner MANSOUR M. SAID	Art Unit 2629	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. **Claims 10-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Oomura (2003/0020413).**

As to claim 10, Oomura teaches a circuit for controlling a current modulator (-M-) having a source electrode, a drain electrode, a gat electrode and an undefined trip threshold voltage (figures 1-12) and (page 3, paragraphs 0050-0057), the circuit including trip threshold voltage compensation means, wherein the trip threshold voltage compensation means comprise at least one operational amplifier, having an inverting input [(-)], a non-inverting input [(+)] and an output terminal (figures 1,& 4-12), in which the output terminal is capable of being connected to the gate electrode of the said modulator and in which the inverting input [(-)] is capable of being connected to the source electrode of the said modulator (figures 1,& 4-12, page 5, paragraphs 0091-0093, page 6, paragraph 0100-0101, and page 6, paragraph 0109) the said connections thus forming a feedback capable of compensating for the trip threshold voltage of the modulator so that the intensity of the drain current flowing through the modulator (-M-) is independent of the trip threshold voltage of the modulator (figures 1,& 4-12, page 4, paragraph

Art Unit: 2629

0059, page 5, paragraphs 0091-0093, page 6, paragraph 0100-0101, and page 6, paragraph 0109).

As to claim 11, Oomura teaches wherein it includes a storage capacitor connected to the gate electrode of the modulator and capable of storing the voltage applied to the gate electrode of the modulator (figures 4-11, and page 5, paragraph 0088-0091)).

Allowable Subject Matter

3. Claims 1-9 are allowed.
